Face

Four multi-depth cartridges directly transfer ultrasound energy into multiple layers of the face to trigger collagen renewal for a tighter, younger complexion. The 2.0mm cartridge can also treat both narrow and sensitive contours with a slimmer transducer and faster shot speed.

Body

Macro-focused cartridges at 6.0mm, 9.0mm, and 13.0mm directly transfer an equal distribution of ultrasound energy into the subcutaneous tissue of multiple body areas, inducing contractions as well as naturally disposing of stubborn fat cells for contouring purposes.

Neocollagenesis

Collagen renewal in the face triggered by HIFU involves heating the dermal and superficial muscular aponeurotic system (SMAS) layers that undergo separate phases of blood coagulation, wound contractions, and tighter shelving of new collagen to reduce wrinkles and sagging skin.

Proliferative Phase

Remodeling Phase

FAQ

What are the advantages of the Ultraformer III?

The Ultraformer III utilizes cartridges focused on multiple depths of skin for lifting and tightening the face as well as tightening body tissues for contouring purposes. The patient can receive customized treatments on the face and body with the stable delivery of ultrasound energy, fast application, and precise accuracy of MMFU-powered transducers.

Are there any side effects?

Although both desired and competitive results for facial lifting and tightening and body contouring will likely show over the course of 3 months after receiving treatment, patients may still experience slight redness for a few hours as well as swelling or tingling in either treatment area of focus for up to a few weeks. There may also be bruising and numbness on treated areas but should resolve 2-4 weeks following procedure.

Is there any pain during treatment?

The Ultraformer III delivers comfortable procedures with its uniquely-designed transducer system developed only by CLASSYS. Many patients and practitioners report that the Ultraformer III, in comparison with other devices, delivers minimal pain with slight discomfort to the face or body, though sensations quickly subside immediately following treatment.

Who is a suitable candidate for Ultraformer treatment?

Patients with diverse skin conditions such as fine lines, wrinkles, and hyperpigmentation on the face, or stubborn belly fat and love handles desiring a more curvaceous body figure, serve as ideal candidates for the Ultraformer III. Practitioners can also accommodate both face and body profiles with a variety of multi-depth cartridges that cater to a larger demographic of candidates.

Advantages

- ✓ Combination of Micro & Macro
- ✓ Multi-depth Focused Cartridges
- ✓ Time Efficient & Convenient
- ✓ No Downtime & Non-Invasive
- ✓ Face & Body Application
- ✓ Customized Treatment Plan

Medical Professional Testimonials

"I was deeply impressed by the skin-lifting results after experiencing the Ultraformer III for the first time. It shows significant scientific improvements of HIFU technology to develop great results. I believe Classys will be one of the leading global companies to come based on their outstanding technology."

Dr. Benjamin Ascher, MD

"Ultraformer III's skin tightening effects are amazing. Laser technology has limitations in terms of clinical results and side effects. The Ultraformer III presents excellent skin tightening using HIFU that delivers energy, especially to the SMAS layer. The energy takes apart old collagen and induces formation of new collagen effectively."

Dr. Franco Lauro, MD

"I've been using the Ultraformer III for more than a year now and I am very satisfied with its clinical results. I believe the Ultraformer III is a game changer for skin lifting. Injections and surgery were options for skin lifting prior to HIFU, but now the Ultraformer III non-surgical treatment reflects better results."

Dr. Jean Louis Sebagh, MD

"Ultraformer III brings immediate tightening effects with different cartridges for the face. Surgery was the normal option for skin-lifting procedures but now we can achieve equal results using the Ultraformer III non-invasively. My patients are always surprised about their remarkable clinical outcomes."

Dr. Klaus Fritz, MD

"The Ultraformer III is a very effective and satisfactory device that makes it possible to offer my patients a very complete treatment. I have experience with other HIFU devices, however, before the Ultraformer III, I was not satisfied with other devices due to high pain levels and unsatisfactory clinical results."

Dr. Nobuhiro Suetake, MD
